Introduction

This document explains how to upgrade your Scalar 50 library with redundant power supplies. During normal operations, both the standard power supplies and redundant power supplies share the power load. During a power supply failure, the redundant power supply takes over the full power load ensuring normal library operation. The redundant power supply upgrade procedure consists of the following steps:

- [Preparing the Library](#)
- [Installing the Power Supply](#)

Preparing the Library

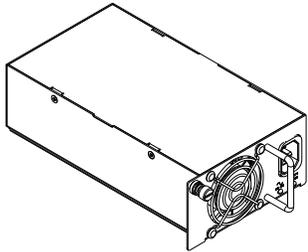

Before beginning the installation procedure, make sure that you have the required upgrade kit(s).

Required Upgrade Kit

Refer to the following tables for the upgrade kit contents (see [table 1](#)):

Note: All part numbers are subject to change without notice.

Required Tools

The following tool is required to perform the redundant power supply upgrade procedure:

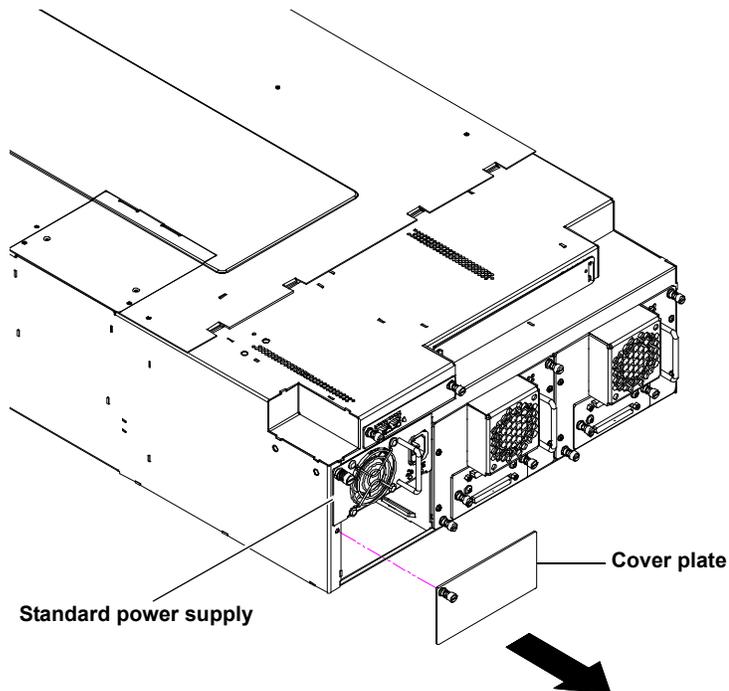

- Flat blade screw driver

Installing the Power Supply

To install the redundant power supply(s):

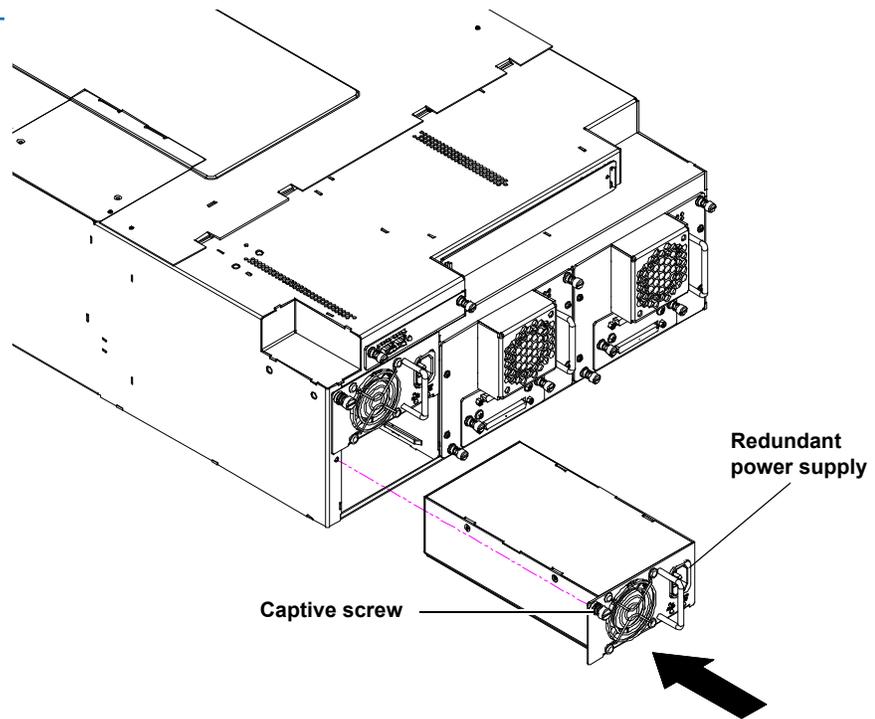

- 1 Remove the power supply bay cover plates by loosening the captive screw with a flat blade screwdriver (see [figure 1](#)).

Figure 1 Removing the Power Supply Bay Cover Plates

- 2 Insert the redundant power supply into the power supply bay and tighten the captive screws with a flat blade screwdriver (see [figure 2](#)).

Figure 2 Inserting the
Redundant Power Supply

- 3 Plug the AC power cords from the power supplies to an available power source.

The redundant power supply upgrade procedure is complete.
