About This Guide and Your Product

This guide is for library customers, partners, third party management software developers, and other parties interested in integrating the Scalar® i500 with commercial management frameworks. It assumes that you have a working knowledge of Simple Network Management Protocol (SNMP), that you can compile a Management Information Base (MIB) on your framework application, that you can perform SNMP GET operations, and that you know how to collect SNMP traps and filter them for information.

This guide describes information that you can obtain from the Scalar i500 library using SNMP. Using SNMP, you can monitor the library from a network management application rather than—or in addition to—the library's Reliability, Availability, and Serviceability (RAS) ticket system. For information about the *Scalar i500 library* itself, refer to the *Scalar i500 Tape Library User's Guide*.

The Scalar i500 library supports SNMP by publishing a MIB that can be queried to obtain the status of the library and many of its individual components. You can obtain status information automatically by configuring the library to send alerts using SNMP traps, or you can obtain it on an ad-hoc basis by sending SNMP queries from your network management application.

Although the library's MIB contains additional objects that can be monitored via SNMP, this document provides details only about the objects that are most likely to be requested from the MIB. It also identifies the SNMP traps that can provide library status information to you automatically.

For more information about the library MIBs, contact technical support. For information on integrating MIBs with an SNMP management application, contact your network management application vendor.

Explanation of Symbols and Notes

The following symbols appear throughout this document to highlight important information.

WARNING

INDICATES A POTENTIALLY HAZARDOUS SITUATION WHICH, IF NOT AVOIDED, COULD RESULT IN DEATH OR BODILY INJURY.

CAUTION

Indicates a situation that may cause possible damage to equipment, loss of data, or interference with other equipment.

Note

Indicates important information that helps you make better use of your system.

Other Documents You Might Need

The following document is also available for this product. This document can be found on the product documentation CD or at www.quantum.com/support.

2

Description

Simple Network Management Protocol (SNMP) is a light-weight protocol designed for remote management and monitoring of infrastructure devices. The Scalar i500 provides SNMP support so you can use a framework application to monitor the status of the library. Using SNMP, you can be alerted of numerous library events.

The Scalar i500 also provides detailed status reports from its own reporting system, called the Reliability, Availability, and Serviceability (RAS) ticket system. RAS tickets enable library administrators to diagnose specific library events.

SNMP Functionality Available to Remote Applications

The Scalar i500 supports standard SNMP functionality, including GET queries and unicast traps (which can be sent only to registered recipients), that enables you to monitor library status from a remote application. SET commands are currently not enabled on the Scalar i500.

All Scalar i500MIB variables are supported by Quantum for remote management of the library.

Specific Scalar i500 SNMP characteristics include:

- Supports SNMP v1, v2c, and v3
- Supports SNMP v1 and v2 traps as defined by RFC 1157. You can set the library to report SNMP traps using either v1 or v2 (v1 is the default). The timeout for all SNMP requests to the library must be at 10 seconds or greater (command line parameter-t).
- SMIv2 compliance only
- Usage of port 161 for GET queries
- Default community read/trap strings: *publicCmtyStr* (see [SNMP Community Strings](#) on page 7)
- Trap Registration interface in the library's remote web client, which enables you to configure application IP addresses, transport protocols, and user-configurable UDP port numbers to receive traps

Accessing SNMP Information

SNMP information can be obtained from the Scalar i500 using traps and GET queries. Using the information contained in this guide, library administrators can configure their framework application to generate alerts to receive Scalar i500 SNMP information.

By default, most SNMP information is returned as an integer value (library partition names, however, are returned as string values). For instance, the return value of *Library Main Door* might be 2, which indicates that the library door is closed.

You can, however, configure the framework application to return status information as a string value, which provides a description of the status. For example, the return value of *Library Main Door* might be *closed(2)*. To do this, you must compile and integrate the library's MIBs with your framework application.

SNMPv3

Although the Scalar i500 supports SNMP version 1 and version 2c for MIB information retrieval, we strongly recommend that you access the library using SNMP version 3 (SNMPv3). SNMPv3 is the most secure of the three versions, as it supports message digest 5, or MD5, as its authentication protocol.

To access the library for SNMP support, use the following values as needed in the remote management application:

User name: Admin

Context name: (None. Leave this field blank.)

Authentication protocol: MD5

Privacy protocol: (None. Leave this field blank.)

Password: Your Admin password

For secure access to the library using SNMP, disable SNMPv1 and SNMPv2c access from the remote web client and the operator panel. For more information, see either the *Scalar i500 User's Guide* or the relevant Scalar i500 online help topics.

SNMP Traps

Traps enable alerts to be sent automatically to registered hosts when specific events occur. Only one application per UDP port can listen for traps.

The Scalar i500 supports SNMP v1 and v2 traps as defined by RFC 1157.

You can set the library to report SNMP traps using either v1 or v2 (v1 is the default). The timeout for all SNMP requests to the library must be at 10 seconds or greater (command line parameter-t).

To receive traps, you must perform two steps:

- 1 Configure your framework application to collect traps from the Scalar i500.
- 2 Using the library's **SNMP Trap Registrations** feature, register the host's IP address, transport protocol, and UDP port number.

Registration informs the Scalar i500 to send traps to the host.

For additional details about registering a host with the Scalar i500, refer to the *Scalar i500 Tape Library User's Guide*.

SNMP Queries

SNMP queries, or GET queries, can be initiated on a periodic basis by the framework application. By querying the MIB, hosts can gather status information about specific components of the library. Frequent MIB queries are not required, however, since the SNMP agent is event-driven.

CAUTION

As with any SNMP device, excessive MIB queries can result in performance degradation for the SNMP daemon, as well as for the network.

GETs must also include an instance ID. The instance identifies a specific device from which you can retrieve status information. For example, to determine if the second partition on a Scalar i500 is online, access the MIB variable for logical library online status and select the instance for partition 2.

SNMP Community Strings

An SNMP community string is a text string that acts as a password to authenticate messages sent between the SNMP remote management application and the device (the SNMP agent). SNMP **Get** and **Get-next** requests are valid only if the community string in the request matches the community string at the device. If the community strings do not match, either modify the community string at the device so that it is the string that the management station expects, or modify the management station so that it uses the device's community strings.

The community string is included in every SNMPv1 and SNMPv2C packet transmitted between the SNMP manager and the SNMP agent. This string is case sensitive, cannot be empty, and cannot exceed 32 characters.

Use this procedure to configure the SNMP community string.

- 1 Login to the remote web client.
- 2 Go to **Setup > Network Management > SNMP**.
- 3 Change the community string value.
- 4 Click **Apply**.

SNMP Authentication Traps

SNMP authentication traps occur in a number of conditions. By default, this option is disabled. In particular, they can occur when the SNMP agent:

- Receives a request that does not contain the correct community name.
- Receives a request not sent from a member of the acceptable host list.
- Receives a request from a bad user name or password when using SNMP Version 3.
- Sends an authentication trap message to one or more trap destinations (management systems), indicating authentication failure.

Use this procedure to configure SNMP authentication traps.

- 1 Login to the remote web client.
- 2 Go to **Setup > Network Management > SNMP**.
- 3 Do one of the following:
 - Click the **Authentication traps** check box to enable authentication traps.
 - Remove the check from the **Authentication traps** check box to disable authentication traps.
- 4 Click **Apply**.

3

MIB Variables - Drive Information

You can poll the variables in this section to obtain information about drives on the library. The drive variables fall into the following categories:

- [Physical Drive Information](#)
- [Library Interfaces - Fibre Channel](#)
- [Library Interfaces - SAS](#)
- [Library Interfaces - SCSI](#)

Note

All variables share the same object ID (OID) prefix of: 1.3.6.1.4.1.3764.1.10.10

Physical Drive Information

Physical Drive Readiness

Name: overallPhDriveReadinessStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.11.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).physicalDrive(11).overallPhDriveReadinessStatus(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: physicalDrive

Next sibling: physicalDriveTable

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Status: current

Max access: read-only

Description: Physical drive serial number.

Library Interfaces - Fibre Channel

Fibre Channel Port Type

Name: fcPortType

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortType(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: fcPortEntry

Prev sibling: fcPortIndex

Next sibling: fcPortWWNodeName

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FCPortType

Status: current

Max access: read-only

Description: Fibre Channel port type.

Fibre Channel Port World Wide Node Name

Name: fcPortWWNodeName

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortWWNodeName(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: fcPortEntry

Prev sibling: fcPortType

Next sibling: fcPortWWPortName

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: 8-byte value representing the drive's World Wide Node Name.

Fibre Channel Port World Wide Port Name (WWPN)

Name :fcPortWWPortName

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.4

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortWWPortName(4)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: fcPortEntry

Prev sibling: fcPortWWNodeName

Next sibling: fcPortLoopId

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: World Wide Name of a port in the Fibre Channel fabric.

Fibre Channel Port Loop ID

Name: fcPortLoopId

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.5

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortLoopId(5)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: fcPortEntry

Prev sibling: fcPortWWPortName

Next sibling: fcPortLoopIdMode

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Loop ID for Fibre Channel drives; undefined for drives of other interface types.

Fibre Channel Port Loop ID Mode

Name: fcPortLoopIdMode

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.6

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortLoopIdMode(6)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: fcPortEntry

Prev sibling: fcPortLoopId

Next sibling: fcPortId

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FCPortLoopIdMode

Status: current

Max access: read-only

Description: Loop ID mode for Fibre Channel drives; undefined for drives of other interface types. Controls negotiation of the port ID on the Fibre Channel connection.

Fibre Channel Port ID

Name: fcPortId

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.7

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortId(7)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: fcPortEntry

Prev sibling: fcPortLoopIdMode

Next sibling: fcPortNegotiatedSpeed

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Port ID for fabric attached Fibre Channel drives; undefined for drives of other interface types.

Fibre Channel Port Negotiated Speed

Name: fcPortNegotiatedSpeed

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.8

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortNegotiatedSpeed(8)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: fcPortEntry

Prev sibling: fcPortId

Next sibling: fcPortRasStatus

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FCPortSpeed

Status: current

Max access: read-only

Description: The actual speed as negotiated. The numeric value is equal to the port speed in gigabits per second.

Fibre Channel Port RAS Status

Name: fcPortRasStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.9

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortRasStatus(9)

Module: ADIC-TAPE-LIBRARY-MIB
Parent: fcPortEntry
Prev sibling: fcPortNegotiatedSpeed
Next sibling: fcPortFWRev
Numerical syntax: Integer (32 bit)
Base syntax: INTEGER
Composed syntax: RASSubSystemStatus
Status: current
Max access: read-only
Description: Currently not applicable.

Fibre Channel Port Firmware Revision

Name: fcPortFWRev
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.10
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortFWRev(10)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: fcPortEntry
Prev sibling: fcPortRasStatus
Next sibling: fcPortFrameSize
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: DisplayString
Status: current
Max access: read-only
Description: Firmware revision number/identifier for this Fibre Channel controller.

Fibre Channel Port Frame Size

Name: fcPortFrameSize
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.11
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortFrameSize(11)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: fcPortEntry
Prev sibling: fcPortFWRev

Next sibling: fcPortDriveSerialNumber

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Fibre Channel frame size.

Fibre Channel Port Drive Serial Number

Name: fcPortDriveSerialNumber

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.12

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortDriveSerialNumber(12)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: fcPortEntry

Prev sibling: fcPortFrameSize

Next sibling: fcPortLogicalLibrarySerialNumber

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Tape drive serial number.

Fibre Channel Port Logical Library Serial Number

Name: fcPortLogicalLibrarySerialNumber

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.1.1.13

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).fcPortTable(1).fcPortEntry(1).fcPortLogicalLibrarySerialNumber(13)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: fcPortEntry

Prev sibling: fcPortDriveSerialNumber

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Tape drive logical library serial number.

Library Interfaces - SAS

SAS Port Address

Name: sasPortAddress

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.3.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).sasPortTable(3).sasPortEntry(1).sasPortAddress(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: sasPortEntry

Prev sibling: sasPortIndex

Next sibling: sasPortRasStatus

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: 8-byte value representing the World Wide Name for this drive.

SAS Port RAS Status

Name: sasPortRasStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.3.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).sasPortTable(3).sasPortEntry(1).sasPortRasStatus(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: sasPortEntry

Prev sibling: sasPortAddress

Next sibling: sasPortNegotiatedSpeed

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: RASSubSystemStatus

Status: current

Max access: read-only

Description: Currently not applicable.

SAS Port Negotiated Speed

Name: sasPortNegotiatedSpeed

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.3.1.4

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).sasPortTable(3).sasPortEntry(1).sasPortNegotiatedSpeed(4)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: sasPortEntry

Prev sibling: sasPortRasStatus

Next sibling: sasPortFWRev

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: SASPortSpeed

Status: current

Max access: read-only

Description: SAS port speed.

SAS Port Firmware Revision

Name: sasPortFWRev

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.3.1.5

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).sasPortTable(3).sasPortEntry(1).sasPortFWRev(5)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: sasPortEntry

Prev sibling: sasPortNegotiatedSpeed

Next sibling: sasPortDriveSerialNumber

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Firmware revision for this tape drive.

SAS Port Drive Serial Number

Name: sasPortDriveSerialNumber

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.3.1.6

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).sasPortTable(3).sasPortEntry(1).sasPortDriveSerialNumber(6)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: sasPortEntry

Prev sibling: sasPortFWRev

Next sibling: sasPortLogicalLibrarySN

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Tape drive serial number.

SAS Port Logical Library Serial Number

Name: sasPortLogicalLibrarySN

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.3.1.7

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).sasPortTable(3).sasPortEntry(1).sasPortLogicalLibrarySN(7)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: sasPortEntry

Prev sibling: sasPortDriveSerialNumber

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Logical library serial number.

Library Interfaces - SCSI

SCSI Controller RAS Status

Name: scsiControllerRasStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerRasStatus(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerIndex

Next sibling: scsiControllerSpeed

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: RASSubSystemStatus

Status: current

Max access: read-only

Description: Currently not applicable.

SCSI Controller Speed

Name: scsiControllerSpeed

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerSpeed(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerRasStatus

Next sibling: scsiControllerRole

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: SCSI CtrlSpeed

Status: current

Max access: read-only

Description: SCSI transaction speed.

SCSI Controller Role

Name: scsiControllerRole

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.4

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerRole(4)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerSpeed

Next sibling: scsiControllerIoCard

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: current

Max access: read-only

Value list:

1: target(0)

2: initiator(1)

Description: SCSI role of the drive (target or initiator).

SCSI Controller I/O Card

Name: scsiControllerIoCard

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.5

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerIoCard(5)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerRole

Next sibling: scsiControllerMaxIds

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: SCSI CtrlCardType

Status: current

Max access: read-only

Description: Type of SCSI controller hardware.

SCSI Controller Maximum IDs

Name: scsiControllerMaxIds

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.6

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerMaxIds(6)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerIoCard

Next sibling: scsiControllerMaxLuns

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: current

Max access: read-only

Description: Maximum Number of IDs for this SCSI controller.

SCSI Controller Maximum LUNs

Name: scsiControllerMaxLuns

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.7

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerMaxLuns(7)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerMaxIds

Next sibling: scsiControllerMaxWidth

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: current

Max access: read-only

Description: Maximum Number of LUNs for this SCSI controller.

SCSI Controller Maximum Width

Name: scsiControllerMaxWidth

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.8

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerMaxWidth(8)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerMaxLuns

Next sibling: scsiControllerFWRev

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: current

Max access: read-only

Description: Maximum transfer width in bits.

SCSI Controller Firmware Revision

Name: scsiControllerFWRev

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.9

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerFWRev(9)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerMaxWidth

Next sibling: scsiControllerDriveSerialNumber

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Firmware revision for this SCSI controller.

SCSI Controller Drive Serial Number

Name: scsiControllerDriveSerialNumber

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.10

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerDriveSerialNumber(10)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerFWRev

Next sibling: scsiControllerLogicalLibrarySN

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Serial number of tape drive.

SCSI Controller Logical Library Serial Number

Name: scsiControllerLogicalLibrarySN

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.15.2.1.11

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).libraryInterfaces(15).scsiControllerTable(2).scsiControllerEntry(1).scsiControllerLogicalLibrarySN(11)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: scsiControllerEntry

Prev sibling: scsiControllerDriveSerialNumber

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Logical library serial number.

4

MIB Variables - Library System Information

You can poll the variables in this section to obtain information about the library. The Library System Information variables contain the following subsystems:

- [Tape Library System](#)
- [Physical Library](#)
- [Logical Library](#)
- [Fibre Channel I/O Blade Interfaces](#)

Note

All variables share the same object ID (OID) prefix of: 1.3.6.1.4.1.3764.1.10.10

Tape Library System

Library IP Address

Name: libraryIpAddress

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.1.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).tapeLibrarySystem(1).libraryIpAddress(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: tapeLibrarySystem

Next sibling: librarySNMPAgentDescription

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: The IP address this SNMP agent. If the library has only an IPv4 address, or both an IPv4 and an IPv6 address, then the IP address is displayed in IPv4 format (xxx.xxx.xxx.xxx). If the library only has an IPv6 address, then it will report an IPv6 format address.

Library SNMP Agent Description

Name: librarySNMPAgentDescription

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).tapeLibrarySystem(1).librarySNMPAgentDescription(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: tapeLibrarySystem

Prev sibling: libraryIpAddress

Next sibling: libraryName

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Description of the library SNMP agent.

Library Name

Name: libraryName

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.1.3

Full path:

OID: 1.3.6.1.4.1.3764.1.10.10.1.8

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).tapeLibrarySystem(1).libraryGlobalStatus(8)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: tapeLibrarySystem

Prev sibling: libraryModel

Next sibling: libraryURL

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: RASSubSystemStatus

Status: current

Max access: read-only

Description: Current status of the entire library system (including all attached drives).

Library URL

Name: libraryURL

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.1.9

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).tapeLibrarySystem(1).libraryURL(9)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: tapeLibrarySystem

Prev sibling: libraryGlobalStatus

Next sibling: libraryProductName

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: URL of the library's management application.

Library Product Name

Name: libraryProductName

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.1.10

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).tapeLibrarySystem(1).libraryProductName(10)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: tapeLibrarySystem

Prev sibling: libraryURL

Next sibling: libraryFirmwareVersion
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: DisplayString
Status: current
Max access: read-only
Description: Product name of the library.

Library Firmware Version

Name: libraryFirmwareVersion
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.1.11
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).tapeLibrarySystem(1).libraryFirmwareVersion(11)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: tapeLibrarySystem
Prev sibling: libraryProductName
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: DisplayString
Status: current
Max access: read-only
Description: Library firmware version.

Physical Library

Physical Library State

Name: physicalLibraryState
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.14.1
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).physicalLibrary(14).physicalLibraryState(1)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: physicalLibrary
Next sibling: aggregatedMainDoorStatus
Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: OnlineState

Status: current

Max access: read-only

Description: Physical library's overall online status.

Aggregated Main Door Status

Name: aggregatedMainDoorStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.14.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).physicalLibrary(14).aggregatedMainDoorStatus(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: physicalLibrary

Prev sibling: physicalLibraryState

Next sibling: aggregatedIEDoorStatus

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: LibraryDoorStatus

Status: current

Max access: read-only

Description: The status is "open" if any door is open.

Aggregated Import Export (I/E) Door Status

Name: aggregatedIEDoorStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.14.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).physicalLibrary(14).aggregatedIEDoorStatus(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: physicalLibrary

Prev sibling: aggregatedMainDoorStatus

Next sibling: numStorageSlots

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: IEDoorStatus

Status: current

Max access: read-only

Description: Reports "open" if any door is open. Otherwise, reports "closedandLocked" or "closedandUnlocked."

Number of Storage Slots

Name: numStorageSlots

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.14.4

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).physicalLibrary(14).numStorageSlots(4)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: physicalLibrary

Prev sibling: aggregatedIEDoorStatus

Next sibling: numIESlots

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Number of storage slots.

Number of I/E Slots

Name: numIESlots

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.14.5

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).physicalLibrary(14).numIESlots(5)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: physicalLibrary

Prev sibling: numStorageSlots

Next sibling: numPhDrives

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Number of I/E slots.

Number of Physical Drives

Name: numPhDrives

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.14.6

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).physicalLibrary(14).numPhDrives(6)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: physicalLibrary

Prev sibling: numIESlots

Next sibling: robot

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Number of drives.

Robot State

Name: robotState

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.14.30.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).physicalLibrary(14).robot(30).robotState(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: robot

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: RoboticsReadiness

Status: current

Max access: read-only

Description: Device SCSI state.

Logical Library

Number of Logical Libraries

Name: numLogicalLibraries

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).numLogicalLibraries(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibrary

Next sibling: logicalLibraryTable

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Number of existing logical libraries (partitions).

Logical Library Name

Name: logicalLibraryName

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryName(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibraryEntry

Prev sibling: logicalLibraryIndex

Next sibling: logicalLibrarySerialNumber

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Logical library name.

Logical Library Serial Number

Name: logicalLibrarySerialNumber

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibrarySerialNumber(3)

Module: ADIC-TAPE-LIBRARY-MIB
Parent: logicalLibraryEntry
Prev sibling: logicalLibraryName
Next sibling: logicalLibraryModel
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: DisplayString
Status: current
Max access: read-only
Description: Logical library serial number.

Logical Library Model

Name: logicalLibraryModel
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.4
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryModel(4)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: logicalLibraryEntry
Prev sibling: logicalLibrarySerialNumber
Next sibling: logicalLibraryAssignedLun
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: DisplayString
Status: current
Max access: read-only
Description: Logical Library Model

Logical Library Assigned LUN

Name: logicalLibraryAssignedLun
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.5
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryAssignedLun(5)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: logicalLibraryEntry
Prev sibling: logicalLibraryModel

Next sibling: logicalLibraryMediaDomain
Numerical syntax: Integer (32 bit)
Base syntax: Integer32
Composed syntax: Integer32
Status: current
Max access: read-only
Description: Assigned LUN of this library's (virtual) SCSI media changer.

Logical Library Media Domain

Name: logicalLibraryMediaDomain
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.6
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryMediaDomain(6)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: logicalLibraryEntry
Prev sibling: logicalLibraryAssignedLun
Next sibling: logicalLibrarySupportedMediaTypes
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: DisplayString
Status: current
Max access: read-only
Description: Supported media domain.

Logical Library Supported Media Types

Name: logicalLibrarySupportedMediaTypes
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.7
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibrarySupportedMediaTypes(7)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: logicalLibraryEntry
Prev sibling: logicalLibraryMediaDomain
Next sibling: logicalLibraryState
Numerical syntax: Octets
Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: current

Max access: read-only

Description: Supported media types.

Logical Library State

Name: logicalLibraryState

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.8

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryState(8)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibraryEntry

Prev sibling: logicalLibrarySupportedMediaTypes

Next sibling: logicalLibraryNumSlots

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: OnlineState

Status: current

Max access: read-only

Description: Status of logical library.

Logical Library Number of Slots

Name: logicalLibraryNumSlots

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.9

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryNumSlots(9)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibraryEntry

Prev sibling: logicalLibraryState

Next sibling: logicalLibraryNumIE

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Number of storage elements.

Logical Library Number of I/E Slots

Name: logicalLibraryNumIE

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.10

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryNumIE(10)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibraryEntry

Prev sibling: logicalLibraryNumSlots

Next sibling: logicalLibraryNumTapeDrives

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Number of Import/Export (I/E) elements.

Logical Library Number of Tape Drives

Name: logicalLibraryNumTapeDrives

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.11

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryNumTapeDrives(11)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibraryEntry

Prev sibling: logicalLibraryNumIE

Next sibling: logicalLibraryStorageElemAddr

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: Number of tape drives in the partition.

Logical Library Storage Element Address

Name: logicalLibraryStorageElemAddr

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.12

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryStorageElemAddr(12)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibraryEntry

Prev sibling: logicalLibraryNumTapeDrives

Next sibling: logicalLibraryIEElemAddr

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: First storage element address of the partition.

Logical Library I/E Element Address

Name: logicalLibraryIEElemAddr

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.13

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryIEElemAddr(13)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibraryEntry

Prev sibling: logicalLibraryStorageElemAddr

Next sibling: logicalLibraryTapeDriveElemAddr

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: First import/export element address of the partition.

Logical Library Tape Drive Element Address

Name: logicalLibraryTapeDriveElemAddr

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.14

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryTapeDriveElemAddr(14)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibraryEntry

Prev sibling: logicalLibraryIEElemAddr

Next sibling: logicalLibraryChangerDeviceAddr

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax: Integer32

Status: current

Max access: read-only

Description: First data transfer element address of the partition.

Logical Library Changer Device Address

Name: logicalLibraryChangerDeviceAddr

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.13.2.1.15

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).logicalLibrary(13).logicalLibraryTable(2).logicalLibraryEntry(1).logicalLibraryChangerDeviceAddr(15)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: logicalLibraryEntry

Prev sibling: logicalLibraryTapeDriveElemAddr

Numerical syntax: Integer (32 bit)

Base syntax: Integer32

Composed syntax :Integer32

Status: current

Max access: read-only

Description: First medium transport element address of the partition.

Fibre Channel I/O Blade Interfaces

Blade Table

Blade Index

Name: bladeIndex

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeIndex(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Next sibling: bladeLocation

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: Blade index.

Blade Location

Name: bladeLocation

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeLocation(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeIndex

Next sibling: bladeIP

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Description: Blade location.

Blade IP

Name: bladeIP

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeIP(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeLocation
Next sibling: bladeWWNodeName
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: DisplayString
Status: mandatory
Max access: read-only
Description: Blade IP address.

Blade World Wide Node Name

Name: bladeWWNodeName
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.4
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeWWNodeName(4)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: bladeEntry
Prev sibling: bladeIP
Next sibling: bladeHealthCheckValue
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: OCTET STRING
Status: mandatory
Max access: read-only
Description: Blade World Wide Node Name.

Blade Health Check Value

Name: bladeHealthCheckValue
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.5
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeHealthCheckValue(5)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: bladeEntry
Prev sibling: bladeWWNodeName
Next sibling: bladeHealthCheckLevel
Numerical syntax: Gauge (32 bit)
Base syntax: Gauge

Composed syntax: Gauge

Status: mandatory

Max access: read-only

Description: Value in percent of health check tests passed.

Blade Health Check Level

Name: bladeHealthCheckLevel

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.6

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeHealthCheckLevel(6)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeHealthCheckValue

Next sibling: bladeHealthCheckInterval

Numerical syntax: Gauge (32 bit)

Base syntax: Gauge

Composed syntax: Gauge

Status: mandatory

Max access: read-only

Value list:

1: none(0)

2: system(1)

3: interface(2)

4: simpleDevice(3)

5: deviceReady(4)

Description: Scrutiny level of health check function.

Blade Health Check Interval

Name: bladeHealthCheckInterval

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.7

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeHealthCheckInterval(7)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeHealthCheckLevel

Next sibling: bladeFWRev

Numerical syntax: Gauge (32 bit)

Base syntax: Gauge

Composed syntax: Gauge

Status: mandatory

Max access: read-only

Description: Health check interval in minutes.

Blade Firmware Revision

Name: bladeFWRev

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.8

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeFWRev(8)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeHealthCheckInterval

Next sibling: bladeSerialNumber

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 0..64

Description: Blade firmware revision information.

Blade Serial Number

Name: bladeSerialNumber

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.9

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeSerialNumber(9)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeFWRev

Next sibling: bladeEVPSEnabled

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 0..64

Description: Blade serial number.

Blade EVPS Enabled

Name: bladeEVPSEnabled

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.10

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeEVPSEnabled(10)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeSerialNumber

Next sibling: bladeMaxHostLun

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description:

Bit 0: EVPS active if 1, inactive if 0.

Bit 1: EVPS licensed if 1, unlicensed if 0.

Blade Maximum Host Lun

Name: bladeMaxHostLun

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.11

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeMaxHostLun(11)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeEVPSEnabled

Next sibling: bladeState

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: The number of devices one host can see.

Blade State

Name: bladeState

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.12

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bladeState(12)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeMaxHostLun

Next sibling: blHPFLinkDownThreshold

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: BladeState

Status: mandatory

Max access: read-only

Description: Blade state.

Blade Host Port Failover Link Down Threshold

Name: blHPFLinkDownThreshold

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.13

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).blHPFLinkDownThreshold(13)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bladeState

Next sibling: blHPFErrorRecoveryMode

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: Used to set the Link Down threshold delay period in seconds. The failover is triggered when the delay period ends.

Blade Host Port Failover Error Recovery Mode

Name: bHPFErrorRecoveryMode

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.14

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bHPFErrorRecoveryMode(14)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bHPFLinkDownThreshold

Next sibling: bHPFLinkDownRecoveryMode

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FcHPFRecoveryType

Status: mandatory

Max access: read-only

Description: Used to set the global recovery mode for failures that happen due to FC cable errors. Values: returnToActive(0), returnToStandby(1), requiresIntervention(2).

Blade Host Port Failover Link Down Recovery Mode

Name: bHPFLinkDownRecoveryMode

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.1.1.15

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bladeTable(1).bladeEntry(1).bHPFLinkDownRecoveryMode(15)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bladeEntry

Prev sibling: bHPFErrorRecoveryMode

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FcHPFRecoveryType

Status: mandatory

Max access: read-only

Description: Used to set the global recovery mode for failures that happen due to Link Down errors. Values: returnToActive(0), returnToStandby(1), requiresIntervention(2).

Blade Dev Entry

Blade Device Index

Name: blDevIndex

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevIndex(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Next sibling: blDevUID

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: MIB table index.

Blade Device Universal Identifier

Name: blDevUID

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevUID(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevIndex

Next sibling: blDevType

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 16

Description: Universal identifier of the blade.

Blade Device Type

Name: blDevType

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevType(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevUID

Next sibling: blDevVendor

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: DeviceType

Status: mandatory

Max access: read-only

Description: Device type.

Blade Device Vendor

Name: blDevVendor

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.4

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevVendor(4)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevType

Next sibling: blDevProduct

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 8

Description: Device vendor.

Blade Device Product

Name: blDevProduct

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.5

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevProduct(5)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevVendor

Next sibling: blDevSerial

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 16

Description: Device product identifier.

Blade Device Serial

Name: blDevSerial

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.6

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevSerial(6)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevProduct

Next sibling: blDevInterfaceType

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 0..32

Description: Device serial number.

Blade Device Interface Type

Name: blDevInterfaceType

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.7

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevInterfaceType(7)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevSerial

Next sibling: blDevLun

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: InterfaceType

Status: mandatory

Max access: read-only

Description: This device's type of communication interface.

Blade Device LUN

Name: blDevLun

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.8

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevLun(8)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevInterfaceType

Next sibling: blDevCtrlIndex

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: SCSI logical unit number of the device.

Blade Device Controller Index

Name: blDevCtrlIndex

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.9

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevCtrlIndex(9)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevLun

Next sibling: blDevFWRev

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: Index of this device's controller in the controller's MIB table and type-specific controller tables.

Blade Device Firmware Revision

Name: blDevFWRev

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.10

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevFWRev(10)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevCtrlrIndex

Next sibling: blDevTargetLun

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 0..32

Description: Device firmware revision number/identifier.

Blade Device Target LUN

Name: blDevTargetLun

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.2.1.11

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blDevTable(2).blDevEntry(1).blDevTargetLun(11)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blDevEntry

Prev sibling: blDevFWRev

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: This target device's logical unit number as seen from attached host.

Blade Controller Table

Blade Controller Index

Name: blCtrlIndex

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.3.1.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blCtrlTable(3).blCtrlEntry(1).blCtrlIndex(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blCtrlEntry

Next sibling: blCtrlType

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: MIB table index.

Blade Controller Type

Name: blCtrlType

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.3.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blCtrlTable(3).blCtrlEntry(1).blCtrlType(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blCtrlEntry

Prev sibling: blCtrlIndex

Next sibling: blCtrlChannelMask

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: InterfaceType

Status: mandatory

Max access: read-only

Description: Communication interface type.

Blade Controller Channel Mask

Name: blCtrlChannelMask

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.3.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blCtrlTable(3).blCtrlEntry(1).blCtrlChannelMask(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blCtrlEntry

Prev sibling: blCtrlType

Numerical syntax: Gauge (32 bit)

Base syntax: Gauge

Composed syntax: Gauge

Status: mandatory

Max access: read-write

Description: Specifies access permissions for this initiator in bits 0 through 18, as follows:

-* SCSI Channels *-

Bit 0 => Is access DISALLOWED to SCSI channel 1 ?

Bit 1 => Is access DISALLOWED to SCSI channel 2 ?

Bit 2 => Is access DISALLOWED to SCSI channel 3 ?

Bit 3 => Is access DISALLOWED to SCSI channel 4 ?

-* Ultra SCSI Channels *-

Bit 4 => Is access DISALLOWED to Ultra SCSI channel 1 ?

Bit 5 => Is access DISALLOWED to Ultra SCSI channel 2 ?

Bit 6 => Is access DISALLOWED to Ultra SCSI channel 3 ?

Bit 7 => Is access DISALLOWED to Ultra SCSI channel 4 ?

Bit 8 => Is access DISALLOWED to Ultra SCSI channel 5 ?

Bit 9 => Is access DISALLOWED to Ultra SCSI channel 6 ?

-* Fibre Channel *-

Bit 10 => Is access DISALLOWED to Fibre Channel 1 ?

Bit 11 => Is access DISALLOWED to Fibre Channel 2 ?

Bit 12 => Is access DISALLOWED to Fibre Channel 3 ?

Bit 13 => Is access DISALLOWED to Fibre Channel 4 ?

Bit 14 => Is access DISALLOWED to Fibre Channel 5 ?

Bit 15 => Is access DISALLOWED to Fibre Channel 6 ?

-* SSA Channels *-

Bit 16 => Is access DISALLOWED to SSA channel 1 ?

Bit 17 => Is access DISALLOWED to SSA Channel 2 ?

Bit 18 => Is access DISALLOWED to SSA Channel 3 ?

=====

Blade Fibre Channel Controller Entry

Blade Fibre Channel Controller Status

Name: bIFcCtrlStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.4.1.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bIFcCtrlTable(4).bIFcCtrlEntry(1).bIFcCtrlStatus(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bIFcCtrlEntry

Next sibling: bIFcCtrlMaxSpeed

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FcStatus

Status: mandatory

Max access: read-only

Description: Status of the Fibre Channel blade ports.

Blade Fibre Channel Controller Maximum Speed

Name: bIFcCtrlMaxSpeed

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.4.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bIFcCtrlTable(4).bIFcCtrlEntry(1).bIFcCtrlMaxSpeed(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bIFcCtrlEntry

Prev sibling: bIFcCtrlStatus

Next sibling: bIFcCtrlWWPPortName

Numerical syntax: Gauge (32 bit)

Base syntax: Gauge

Composed syntax: Gauge

Status: mandatory

Max access: read-only

Description: Maximum transfer speed in MBytes per second.

Blade Fibre Channel Controller World Wide Port Name

Name: blFcCtrlWWPortName

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.4.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blFcCtrlTable(4).blFcCtrlEntry(1).blFcCtrlWWPortName(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blFcCtrlEntry

Prev sibling: blFcCtrlMaxSpeed

Next sibling: blFcCtrlLoopID

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 17

Description: World Wide Name of the blade's ports.

Blade Fibre Channel Controller Loop ID

Name: blFcCtrlLoopID

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.4.1.4

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blFcCtrlTable(4).blFcCtrlEntry(1).blFcCtrlLoopID(4)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blFcCtrlEntry

Prev sibling: blFcCtrlWWPortName

Next sibling: blFcCtrlLoopIDMode

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Size list: 1: -1..127

Description: Fibre Channel Loop ID.

Blade Fibre Channel Controller Loop ID Mode

Name: bIFcCtrlLoopIDMode

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.4.1.5

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bIFcCtrlTable(4).bIFcCtrlEntry(1).bIFcCtrlLoopIDMode(5)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bIFcCtrlEntry

Prev sibling: bIFcCtrlLoopID

Next sibling: bIFcCtrlPortMode

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FCPortLoopIDMode

Status: mandatory

Max access: read-only

Description: Fibre Channel Loop ID mode (soft or hard).

Blade Fibre Channel Controller Port Mode

Name: bIFcCtrlPortMode

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.4.1.6

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bIFcCtrlTable(4).bIFcCtrlEntry(1).bIFcCtrlPortMode(6)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bIFcCtrlEntry

Prev sibling: bIFcCtrlLoopIDMode

Next sibling: bIFcCtrlConnectionOptions

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FibrePortMode

Status: mandatory

Max access: read-only

Description: Fibre Channel port mode.

Blade Fibre Channel Controller Connection Options

Name: bIFcCtrlConnectionOptions

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.4.1.7

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blFccTlrTable(4).blFccTlrEntry(1).blFccTlrConnectionOptions(7)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blFccTlrEntry

Prev sibling: blFccTlrPortMode

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FibreConnOptions

Status: mandatory

Max access: read-only

Description: Connection options for ISP2200 FC chip. Values 4 – 8 are reserved.

Blade Host Table

Blade Host Index

Name: blHostIndex

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.5.1.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHostTable(5).blHostEntry(1).blHostIndex(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHostEntry

Next sibling: blHostWWName

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: Index into Host Initiator table.

Blade Host World Wide Name

Name: blHostWWName

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.5.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHostTable(5).blHostEntry(1).blHostWWName(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHostEntry

Prev sibling: blHostIndex
Next sibling: blHostName
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: DisplayString
Status: mandatory
Max access: read-write
Size list: 1: 0..32
Description: World Wide Name of this initiator.

Blade Host Name

Name: blHostName
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.16.5.1.3
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHostTable(5).blHostEntry(1).blHostName(3)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: blHostEntry
Prev sibling: blHostWWName
Next sibling: blHostType
Numerical syntax: Octets
Base syntax: OCTET STRING
Composed syntax: DisplayString
Status: mandatory
Max access: read-only
Size list: 1: 0..32
Description: Name for this initiator.

Blade Host Type

Name: blHostType
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.16.5.1.4
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHostTable(5).blHostEntry(1).blHostType(4)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: blHostEntry
Prev sibling: blHostName
Next sibling: blHostPortID

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 0..32

Description: The type of host that is connected to the blade.

Blade Host Port ID

Name: blHostPortID

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.5.1.5

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHostTable(5).blHostEntry(1).blHostPortID(5)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHostEntry

Prev sibling: blHostType

Next sibling: blHostITLData

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: DisplayString

Status: mandatory

Max access: read-only

Size list: 1: 0..32

Description: The ID of the port that is connected to the host.

Blade Host ITL Data

Name: blHostITLData

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.5.1.6

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHostTable(5).blHostEntry(1).blHostITLData(6)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHostEntry

Prev sibling: blHostPortID

Next sibling: blHostLunMap

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: OCTET STRING

Status: mandatory

Max access: read-only

Size list: 1: 256

Description: Initiator-target-logical unit nexus (ITL) access control data for this host. There are 256 possible LUNs with 1 byte of data per LUN.

Blade Host LUN Map

Name: blHostLunMap

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.5.1.7

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHostTable(5).blHostEntry(1).blHostLunMap(7)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHostEntry

Prev sibling: blHostITLData

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: OCTET STRING

Status: mandatory

Max access: read-only

Size list: 1: 512

Description: EVPS Map data. There are 256 possible LUNs with 2 bytes of data for each LUN.

Blade Host Port Failover Map Entry

Blade Host Port Failover Map Virtual Port

Name: blHPFMapVirtualPort

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.6.1.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHPFMapTable(6).blHPFMapEntry(1).blHPFMapVirtualPort(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHPFMapEntry

Next sibling: blHPFMapPrimaryPort

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: The virtual port index. The value is usually the same as the physical port index (see [Blade Host Port Failover Map Primary Port](#)), but will be zero if host port failover is not configured.

Blade Host Port Failover Map Primary Port

Name: bHPFMapPrimaryPort

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.6.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bHPFMapTable(6).bHPFMapEntry(1).bHPFMapPrimaryPort(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bHPFMapEntry

Prev sibling: bHPFMapVirtualPort

Next sibling: bHPFMapStandbyList

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: The physical port index that acts as the default standby.

Blade Host Port Failover Map Standby List

Name: bHPFMapStandbyList

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.6.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).bHPFMapTable(6).bHPFMapEntry(1).bHPFMapStandbyList(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: bHPFMapEntry

Prev sibling: bHPFMapPrimaryPort

Next sibling: bHPFMapActivePort

Numerical syntax: Octets

Base syntax: OCTET STRING

Composed syntax: OCTET STRING

Status: mandatory

Max access: read-only

Size list: 1: 256

Description: The comma-separated list of ports that are configured as standbys for the virtual port (excluding the primary port).

Blade Host Port Failover Map Active Port

Name: blHPFMapActivePort

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.6.1.4

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHPFMapTable(6).blHPFMapEntry(1).blHPFMapActivePort(4)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHPFMapEntry

Prev sibling: blHPFMapStandbyList

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: The physical port that is active on this virtual port.

Blade Host Port Failover Physical Table

Blade Host Port Failover Physical Port

Name: blHPFPhysicalPort

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.7.1.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHPFPhysicalTable(7).blHPFPhysicalEntry(1).blHPFPhysicalPort(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHPFPhysicalEntry

Next sibling: blHPFPhysicalPortFailureType

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: mandatory

Max access: read-only

Description: The physical FC port index.

Blade Host Port Failover Physical Port Failure Type

Name: blHPFPhysicalPortFailureType

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.7.1.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHPFPhysicalTable(7).blHPFPhysicalEntry(1).blHPFPhysicalPortFailureType(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHPFPhysicalEntry

Prev sibling: blHPFPhysicalPort

Next sibling: blHPFPhysicalPortCurrentState

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FcHPFPortFailType

Status: mandatory

Max access: read-only

Description: If this physical port failed, this field provides the type of failure. Values: 0 = None; 1 = Link Down; 2 = Link Error.

Blade Host Port Failover Physical Port Current State

Name: blHPFPhysicalPortCurrentState

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.7.1.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHPFPhysicalTable(7).blHPFPhysicalEntry(1).blHPFPhysicalPortCurrentState(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHPFPhysicalEntry

Prev sibling: blHPFPhysicalPortFailureType

Next sibling: blHPFPhysicalPortIntervention

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: FcHPFPortState

Status: mandatory

Max access: read-only

Description: The current state of this physical port. Values: 0 = Online; 1 = Offline.

Blade Host Port Failover Physical Port Intervention

Name: blHPFPhysicalPortIntervention

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.16.7.1.4

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).bladeInterfaces(16).blHPFPPhysicalTable(7).blHPFPPhysicalEntry(1).blHPFPPhysicalPortIntervention(4)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: blHPFPPhysicalEntry

Prev sibling: blHPFPPhysicalPortCurrentState

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: Boolean

Status: mandatory

Max access: read-only

Description: Does this physical port require intervention? Values: 1 = true; 2 = false.

5

MIB Variables - RAS Subsystem

You can poll the following variables to obtain information about the RAS subsystem on the library.

Note

All variables share the same object ID (OID) prefix of: 1.3.6.1.4.1.3764.1.10.10

Power Status

Name: powerStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.12.1

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).rasSubSystem(12).powerStatus(1)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: rasSubSystem

Next sibling: coolingStatus

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: RASSubSystemStatus

Status: current

Max access: read-only

Description: Indicates overall power supply status.

Cooling Status

Name: coolingStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.12.2

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).rasSubSystem(12).coolingStatus(2)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: rasSubSystem

Prev sibling: powerStatus

Next sibling: controlStatus

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: RASSubSystemStatus

Status: current

Max access: read-only

Description: Indicates overall cooling fans status.

Control Status

Name: controlStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.12.3

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).rasSubSystem(12).controlStatus(3)

Module: ADIC-TAPE-LIBRARY-MIB

Parent: rasSubSystem

Prev sibling: coolingStatus

Next sibling: connectivityStatus

Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: RASSubSystemStatus

Status: current

Max access: read-only

Description: Indicates overall control subsystem status.

Connectivity Status

Name: connectivityStatus

Type: OBJECT-TYPE

OID: 1.3.6.1.4.1.3764.1.10.10.12.4

Full path:

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).rasSubSystem(12).connectivityStatus(4)

Module: ADIC-TAPE-LIBRARY-MIB
Parent: rasSubSystem
Prev sibling: controlStatus
Next sibling: roboticsStatus
Numerical syntax: Integer (32 bit)
Base syntax: INTEGER
Composed syntax: RASSubSystemStatus
Status: current
Max access: read-only
Description: Indicates overall connectivity status.

Robotics Status

Name: roboticsStatus
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.12.5
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).rasSubSystem(12).roboticsStatus(5)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: rasSubSystem
Prev sibling: connectivityStatus
Next sibling: mediaStatus
Numerical syntax: Integer (32 bit)
Base syntax: INTEGER
Composed syntax: RASSubSystemStatus
Status: current
Max access: read-only
Description: Indicates overall robotics status.

Media Status

Name: mediaStatus
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.12.6
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).rasSubSystem(12).mediaStatus(6)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: rasSubSystem

Prev sibling: roboticsStatus
Next sibling: driveStatus
Numerical syntax: Integer (32 bit)
Base syntax: INTEGER
Composed syntax: RASSubSystemStatus
Status: current
Max access: read-only
Description: Indicates overall media status.

Drive Status

Name: driveStatus
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.12.7
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).rasSubSystem(12).driveStatus(7)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: rasSubSystem
Prev sibling: mediaStatus
Next sibling: operatorActionRequest
Numerical syntax: Integer (32 bit)
Base syntax: INTEGER
Composed syntax: RASSubSystemStatus
Status: current
Max access: read-only
Description: Indicates overall drive status.

Operator Action Request

Name: operatorActionRequest
Type: OBJECT-TYPE
OID: 1.3.6.1.4.1.3764.1.10.10.12.8
Full path:
iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).adic(3764).storage(1).library(10).tapeLibraryMIB(10).rasSubSystem(12).operatorActionRequest(8)
Module: ADIC-TAPE-LIBRARY-MIB
Parent: rasSubSystem
Prev sibling: driveStatus
Numerical syntax: Integer (32 bit)

Base syntax: INTEGER

Composed syntax: INTEGER

Status: current

Max access: read-only

Value list: 1: yes(1); 2: no(2).

Description: Yes, if operator action is required.

6

SNMP Traps

This section describes the basic set of Simple Network Management Protocol (SNMP) system status traps issued by the library. Traps pertain to the entire library, not specific modules or partitions.

 **Note** The Scalar i500 supports SNMP v1 and v2 traps as defined by RFC 1157.

Traps defined in the Tape Library Management Information Base (MIB) are issued with enterprise OID “Quantum Tape Library MIB”, which resolves to 1.3.6.1.4.1.3764.1.10.10.

Table 1 Status Traps

Trap ID	Trap	Description
1	tapeLibNotifyStart	Starting Indicates that the tape library has started running.
2	tapeLibNotifyShutdown	Shutting down Indicates that the library is in the process of being shut down.
3	tapeLibNotifyRestart	Restarting Indicates that the library has been restarted. This does not imply anything about whether the configuration has changed or not (unlike the standard coldStart or warmStart traps).
101	startupSequenceCompleted	Startup Sequence Completed Indicates that the library startup sequence has completed.
102	shutdownSequenceInitiated	Shutdown Sequence Initiated Indicates that the library has started its shutdown sequence.
103	phLibraryStateChange	Change in Online State Indicates that the online state of the physical library has changed.

a. The library issues a trap whenever the aggregate state of one of the Reliability, Availability, and Serviceability (RAS) status groups changes. Listening for these traps (rather than querying for them) is the preferred method of monitoring the health of the library.

Table 1 Status Traps (Continued)

Trap ID	Trap	Description
104	moduleDoorStatusChange	Module Door Status Change Indicates that a library access door has been opened, closed, locked, or unlocked, interrupting or enabling power to the robot.
105	ieDoorStatusChange	I/E Door Status Change Indicates that an I/E station door has been opened or closed.
106	roboticsReady	Robotics Ready Indicates that the library's robotics system has transitioned from a "not ready" to "ready" state. Traps 106 and 107 may occur as part of a startup or shutdown procedure. If they occur at another time, a library door may be open.
107	roboticsNotReady	Robotics Not Ready Indicates that the library's robotics system has transitioned from a "ready" to "not ready" state. Traps 106 and 107 may occur as part of a startup or shutdown procedure. If they occur at another time, a library door may be open.
108	logicalLibraryStateChange	Logical Library State Change Indicates that a logical library, also known as a partition, has been taken online or offline.
109	connectivityStatusChange	RAS Status Change: Connectivity^a Indicates that the status of the connectivity subsystem (which includes the I/O management unit and other components) has changed. This may indicate a change to "good" status, so refer to the return value to determine what action you should take. If the return value indicates that a problem exists, use the operator panel or remote web client to determine how to resolve the issue.
110	controlStatusChange	RAS Status Change: Control^a Indicates that a library control problem has been detected. Indicates that the status of the control subsystem (which includes system firmware, the operator panel, and the Library Control Blade) has changed. If the return value indicates that a problem exists, use the operator panel or remote web client to determine how to resolve the issue.
<p>a. The library issues a trap whenever the aggregate state of one of the Reliability, Availability, and Serviceability (RAS) status groups changes. Listening for these traps (rather than querying for them) is the preferred method of monitoring the health of the library.</p>		

Table 1 Status Traps (Continued)

Trap ID	Trap	Description
111	coolingStatusChange	RAS Status Change: Cooling^a Indicates that the status of the cooling subsystem has changed. If the return value indicates that a problem exists, use the operator panel or remote web client to determine how to resolve the issue.
112	drivesStatusChange	RAS Status Change: Drives^a Indicates that the status of the drives and/or media has changed. If the return value indicates that a problem exists, use the operator panel or remote web client to determine how to resolve the issue.
113	mediaStatusChange	RAS Status Change: Media^a Indicates that the status of the media has changed. If the return value indicates that a problem exists, use the operator panel or remote web client to determine how to resolve the issue.
114	powerStatusChange	RAS Status Change: Power^a Indicates that the status of the power subsystem has changed. If the return value indicates that a problem exists, use the operator panel or remote web client to determine how to resolve the issue.
115	roboticsStatusChange	RAS Status Change: Robotics^a Indicates that the status of the robotics subsystem has changed. If the return value indicates that a problem exists, use the operator panel or remote web client to determine how to resolve the issue.
116	operatorInterventionRequired	RAS Status Change: Operator Intervention Required^a Indicates that an error has occurred and that operator intervention is required in order to resolve the issue.
117	driveOnlineStateChange	Drive Online State Change Indicates that a tape drive has been taken online or offline.
121	libraryTapeAlert1	Drive Communication Failure The library set TapeAlert 1, indicating a drive communication failure.
122	libraryTapeAlert2	Library Hardware Failure The library set TapeAlert 2, indicating a library hardware failure.
124	libraryTapeAlert4	Non-mechanical Hardware Failure The library set TapeAlert 4, indicating a non-mechanical hardware failure.
<p>a. The library issues a trap whenever the aggregate state of one of the Reliability, Availability, and Serviceability (RAS) status groups changes. Listening for these traps (rather than querying for them) is the preferred method of monitoring the health of the library.</p>		

Table 1 Status Traps (Continued)

Trap ID	Trap	Description
133	libraryTapeAlert13	Cartridge Pick Problem The library set TapeAlert 13, indicating a problem when picking a tape cartridge.
134	libraryTapeAlert14	Cartridge Placement Problem The library set TapeAlert 14, indicating a problem when placing a tape cartridge.
135	libraryTapeAlert15	Drive Load Problem The library set TapeAlert 15, indicating a problem when loading a tape drive.
136	libraryTapeAlert16	Library Main Access Door Open The library set TapeAlert 16, indicating an open library access door.
137	libraryTapeAlert17	Mailbox Mechanical Problem The library set TapeAlert 17, indicating a mailbox station mechanical problem.
143	libraryTapeAlert23	Excessive Scan Retries The library set TapeAlert 23, indicating that excessive scan retries occurred.
152	libraryTapeAlert32	Barcode Label Unreadable The library set TapeAlert 32, indicating that a tape cartridge barcode label could not be read.
440	userLoggedIn	User Logged In A user is logged in to the remote user interface of the library.
441	userLoginFailed	User Login Failed A login attempt by a user at a remote user interface failed.
442	userLoggedOut	User Logged Out A user is logged out of the remote user interface of the library.
443	librarySettingsChanged	Library Settings Changed A user changed settings on the library.
444	logicalLibrarySettingsChanged	Logical Library Settings Changed A user changed settings on a logical library.
445	driveSettingsChanged	Drive Settings Changed A user changed the settings for a drive.
446	mediaSettingsChanged	Media Settings Changed A user changed the settings on media in the library.
447	firmwareUpdate	Firmware Is Being Updated The firmware on the library is currently being updated.
<p>a. The library issues a trap whenever the aggregate state of one of the Reliability, Availability, and Serviceability (RAS) status groups changes. Listening for these traps (rather than querying for them) is the preferred method of monitoring the health of the library.</p>		

Table 1 Status Traps (Continued)

Trap ID	Trap	Description
451	driveReboot	Drive Has Been Rebooted A drive on the library has been rebooted.
453	adminPasswordChanged	Administrator Password Changed The password for the administrator login has changed.
a. The library issues a trap whenever the aggregate state of one of the Reliability, Availability, and Serviceability (RAS) status groups changes. Listening for these traps (rather than querying for them) is the preferred method of monitoring the health of the library.		

MIBs Implemented

The library requires five Management Information Bases (MIBs): the Quantum Tape Library MIB and four standard SNMP MIBs.

Quantum Tape Library MIB

The Quantum Tape Library MIB provides the following information:

- System identification (library model and serial number)
- Notifications for a changed configuration (added and removed components)
- Library startup and shutdown traps
- Library online and offline status
- Library composition
 - Drives
 - Robotics
 - Fibre Channel I/O Blades
- Library partitioning
- Advanced status information: Reliability, Availability and Serviceability (RAS) functionality

Reference MIBs

The library MIBs reference the following SNMP standard MIBs:

- IPV6-MIB of MIB II
- IP-MIB of MIB II
- RFC 1155-SMI
- RFC 1212
- RFC 1213-MIB
- RFC 1215

These MIBs must be included with your framework application. They are required for accurate compilation of the library MIBs.
