

Product Bulletin 27 Rev C - Revised

Product	StorNext® 2.8.x – 3.5.3
Summary	The IRIX/Solaris Sparc to Linux conversion utility has been found to lose database rows, and should not be used
Rev C Release Date	August 2013
Rev B Release Date	July 2012
Rev A Release Date	May 2008

Problem

The originally released script that converts IRIX or Solaris Sparc MDCs to Linux MDCs can lose database rows and cause serious damage to the file systems being migrated. The scripts named **migrateDumpSource** and **migrateConfigureDestination** that are included with the StorNext 3.5.3 distribution in directory `/usr/adic/TSM/bin` **MUST NOT** be used.

For more information, contact the Quantum Technical Assistance Center and reference **CR 24719**.

Solution

The IRIX/Solaris migration scripts have been updated to address this issue. The latest version of the migration scripts can be located under part number **0-14991-01**. Use the *StorNext Solaris to Linux Migration Guide* (part number **6-67395-01 Rev C or later**) for instructions on using the scripts.

The script and the document are available by contacting Quantum Professional Services. Quantum strongly recommends engaging Quantum Professional Services for all MDC Operating System Conversions.
