Product Alert 6

Product: StorNext® Running Any Version of Linux

Summary: Running KUDZU on a Linux machine can cause data loss

Date: December 2005

Problem:

Running the `kudzu` command on Linux platforms can rewind tape drives that are in use by TSM and lead to lost data.

Solution:

The `kudzu` command should never be run with TSM active, and should be removed from startup processing by entering `chkconfig --del kudzu` at the command prompt.
